EDUCATION

- **University of Calgary** Calgary, AB
Bachelor's of Science, Software Engineering *Sep. 2021 – May 2026*

PROGRAMMING SKILLS

- **Languages:** Python, Ruby, Javascript, C++, C, C#, Java, SQL **Technologies:** AWS, Databricks, Dagster, Unity, React, Node, TensorFlow, Keras, Cohere AI, Voiceflow

EXPERIENCE

- **Cenovus Energy** Calgary, AB
Software Engineer Intern - Data Solutions *Jan. 2024 - Present*
 - Collaborated with Canadian Oil Sands and Thermal Heavy Oil Operations Development and Production teams to understand their data needs and challenges.
 - Designed and developed end-to-end data and analytics solutions tailored to the requirements of different teams.
 - Implemented full-stack development solutions, including full-stack frameworks such as Ruby on Rails.
 - Performed data engineering tasks such as data ingestion, transformation, and storage optimization.
 - Orchestrated data pipelines for efficient and reliable data processing using tools such as Dagster and Databricks.
 - Conducted analysis and reporting on large datasets to derive actionable insights.
 - Applied machine learning and statistical inference techniques to solve complex business problems.
 - Documented processes, workflows, and technical implementations to ensure knowledge sharing and maintain accurate records.
 - Participated in training sessions and workshops to enable teams in adopting and effectively utilizing data solutions.
- **Vertical City** Calgary, AB
Software Deployment Intern *Jul. 2023 - Aug. 2023*
 - Deployed and maintained Ubuntu 20 on elevator/lobby screens, ensuring optimal functionality and performance.
 - Executed comprehensive documentation processes, fostering organized record-keeping for future reference and audits.
 - Worked closely with the Lead of Property Support to establish and maintain robust communication channels, facilitating seamless updates on elevator screens.
 - Proactively addressed any technical issues, employing a problem-solving approach to minimize downtime and ensure uninterrupted elevator screen operations.

PROJECTS

- **BraVRy**
Developed a VR therapy simulation for anxiety-related illnesses using Meta Quest 2, Unity, AWS Lambda, OpenAI Whisper, and biotracking. Placed 2nd at natHacks 2023 (Canada's largest neurotech hackathon), securing seed funding and support. Pitched at InVentures 2024 and won \$10,000 in funding from the University of Calgary.
- **Causal Machine Learning Paper On Mental Health Outcomes**
Used BRFSS data and causal machine learning to analyze the impact of adverse childhood experiences (ACEs) on mental health. Findings include a 30% increase in depressive disorder likelihood due to parental depression. Published as an author in the STEM Fellowship Paper.
- **Swipe-Talk Augmented Reality Project**
Created a mixed reality "swipe to talk" app for non-speaking individuals using Microsoft HoloLens 2. Won 1st place at the IEEE ProjectVoice Hackathon.

HONOURS AND AWARDS

- **1st Place at IEEE SIGHT ProjectVoice Hackathon** September 2023 - Awarded 1st place for developing a "swipe to talk" AR application. [LinkedIn Post](#)
- **2nd Place at NeurAlbertaTech natHacks Hackathon** November 2023 - Received 2nd place for a VR mental health platform. [News Article](#)
- **3rd Place at MedTech HackMedTech Hackathon** February 2023 - Secured 3rd place for a healthcare innovation project. [LinkedIn Post](#)
- **Finalist for Ontario Brain Institute Pitch Competition** May 2024 - Finalist for pitching VR exposure therapy project. [LinkedIn Post](#)
- **Publication in STEM Fellowship** Published as an author for a causal machine learning study on mental health outcomes in STEM Fellowship.
